INTRODUCTION

Faced with the imperative of a swift energy transition, political decisions across all levels of government are dedicated to replacing fossil fuels and nuclear power with renewable alternatives. In this context, offshore wind energy stands out as a viable avenue for achieving economic and societal decarbonization. Notably, in Spain, the Ministry for Ecological Transition and the Demographic Challenge (MITECO) recently ratified Royal Decree 150/2023 on February 28, 2023, outlining Maritime Space Management Plans (POEM) for the country's five marine demarcations. The research presented in this study has been carried out in the Levantine-Balearic demarcation (LEBA), including LEBA 1 situated off the Gulf of Roses/Cap de Creus.

AIM

To understand the different stakeholders involved in the study area and their positioning through various communication channels (press) on different scales (from local to global).

METHODOLOGY

- 1. Define the study area and gain a comprehensive understanding of the characteristics of each offshore wind energy project slated for implementation within it (Figure 1).
- 2. Select various press media outlets spanning different geographic scales, including one local, three regional, two national, and one international source.
- 3. Determine the specific time period for analysis, as indicated by the arrows in Figure 2.
- 4. Choose appropriate keywords for conducting searches within newspaper archives.
- 5. Retrieve and read the located news articles, and download them for further analysis.
- 6. Analyze the results using the MAXQDA qualitative data analysis software.

Key findings Figure 4

- on the selection of search keywords, 407 press articles have been identified: Wind farm (88); offshore wind farm (216); MSP (Maritime Spatial Planning) (41); experimental park (7); and Tramuntana Park (55).
- Among the articles we've analyzed, 168 express support for the offshore wind farm, while 202 take a stance against it. Additionally, 26 articles provide an objective informative purely and Lastly, there perspective. divergent articles that present both pro and con viewpoints.

KEY TAKEAWAYS

- This scrutiny of the newspaper archives has allowed us to closely examine the primary stances of the media over the years. At the same time, it has provided insight into the information reaching the population.
- Thanks to this methodology, we have been able to identify who the stakeholders are and those affected by the construction of the offshore wind farm. In addition, it has helped us understand the level of importance they have for the selected print media outlets.
- The next steps will involve conducting interviews with local stakeholders to understand the degree of relationships that exist among them.
